CONSERVATION IN ACTION: An Educator's Guide to Species at Risk in BC for Grades 8 - 12

Prepared by
Kelly Nordin & DG Blair
January 2016

Overview of Module One: An Introduction to Species at Risk

ACTIVITY 1: What Do You Know About SAR? Intro to Species at Risk

An interactive activity that begins with a series of true/false statements to introduce the concepts associated with species at risk of potential extinction, followed by a group analysis of a case example.

ACTIVITY 2: What Species are at Risk in Your Community?

After a classroom-based introduction to the rationale and methods of field investigation of species at risk, a field trip to a local ecosystem introduces students to species at risk, their habitat and the historical geography of the area.

ACTIVITY 3: Species at Risk in the News

Working in small groups, students complete a project-based learning activity to research and produce a student magazine or other media to inform and take action on local species at risk.

Subject: Science 9

Big Ideas	Learning Standard: Content	Activity			Learning Standard: Curricular Competencies	Activity		
		1	2	3		1	2	3
The biosphere, geosphere, hydrosphere, and atmosphere are interconnected, as matter cycles and energy flows through them.	Matter cycles within biotic and abiotic components of ecosystems	✓*	✓*	✓*	Questioning and predicting			
	Sustainability of systems	✓	✓	✓	Demonstrate a sustained intellectual curiosity about a scientific topic or problem of personal interest	✓	✓	✓
	First Peoples knowledge of interconnectedness and sustainability		✓	✓	Make observations aimed at identifying their own questions, including increasingly complex ones, about the natural world	✓	✓	✓
					Formulate multiples hypotheses and predict multiple outcomes		✓	
					Planning and conducting			
					Collaboratively and individually plan, select, and use appropriate investigation methods, including field work and lab experiments, to collect reliable data (qualitative and quantitative)		✓	
					Assess risks and address ethical, cultural and/or environmental issues associated with their proposed methods and those of others		✓	
					Select and use appropriate equipment, including digital technologies, to systematically and accurately collect and record data		✓	
					Ensure that safety and ethical guidelines are followed in their investigations		✓	
					Processing and analyzing data and information			
					Experience and interpret the local environment		✓	✓
					Apply First Peoples perspectives and knowledge, other ways of knowing, and local knowledge as sources of information		✓	✓
					Seek and analyze patterns, trends, and connections in data, including describing relationships between variables (dependent and independent) and identifying inconsistencies		✓	✓
					Construct, analyze and interpret graphs (including interpolation and extrapolation), models and/or diagrams		✓	✓
					Use knowledge of scientific concepts to draw conclusions that are consistent with evidence		✓	✓
					Analyze cause-and-effect relationships		✓	✓

Subject: Science 9

Big Ideas	Learning Standard: Content	Activity			Learning Standard: Curricular Competencies	Activity		
		1	2	3		1	2	3
					Evaluating			
					Evaluate their methods and experimental conditions, including identifying sources of error or uncertainty, confounding variables, and possible alternative explanations and conclusions		✓	✓
					Describe specific ways to improve their investigation methods and the quality of the data		✓	
					Evaluate the validity of and limitations of a model or analogy in relation to the phenomenon modelled			
					Demonstrate an awareness of assumptions, question information given, and identify bias in their own work and secondary sources		✓	✓
					Consider the changes in knowledge over time as tools and technologies have developed			✓
					Connect scientific explorations to careers in science		✓	✓
					Exercise a healthy, informed skepticism and use scientific knowledge and findings to form their own investigations and to evaluate claims in secondary sources		✓	✓
					Consider social, ethical, and environmental implications of the findings from their own and others' investigations		✓	✓
					Critically analyze the validity of information in secondary sources and evaluate the approaches used to solve problems		✓	✓
					Applying and innovating			
					Contribute to care for self, others, community, and world through personal or collaborative approaches		✓	✓
					Transfer and apply learning to new situations		✓	✓
					Generate and introduce new or refined ideas when problem solving	✓	✓	✓
					Contribute to finding solutions to problems at a local and/or global level through inquiry		✓	✓
					Consider the role of scientists in innovation			
					Communicating			
					Formulate physical or mental theoretical models to describe a phenomenon			
					Communicate scientific ideas, claims, information, and perhaps a suggested course of action, for a specific purpose and audience, constructing evidence-based arguments and using appropriate scientific language, conventions, and representations	✓	✓	✓
					Express and reflect on a variety of experiences, perspectives, and worldviews through place		✓	✓
